DENON PROFESSIONAL UNVEILS SOLUTION SERIES

Six new problem-solving interfaces introduce wireless content streaming to nearly any application.

Fort Lauderdale FL, USA (January 5, 2015)— Denon Professional (denonpro.com), today introduced its unique Solution Series, a family of compact interfaces that enable connectivity solutions with innovative wireless technology. With all six models, the Solution Series lets users perform custom signal management and get content from where it lives to where it's needed—without running wires, drilling holes or reworking existing set-ups. Discreet, affordable, versatile and easily mountable in a variety of locations, Solution Series is perfect for new installs or updating existing AV and sound reinforcement systems.

Denon Professional Solution Series Overview:

DN-200PM Connected Presentation Manager — This interface functions as the central hub for distributing presentation/meeting content in conference rooms and classrooms. It features a Quad Core processor and 8GB of onboard storage, and supports DLNA, AirPlay, Miracast, Bluetooth® and UPnP for simple connection to source and input devices. The DN-200PM has three USB ports, an HDMI out, RJ-45 Ethernet port, optical and 1/8" audio outs. With access to Android apps, the DN-200PM is an exceptional solution for media streaming and digital signage, and will be available in late Spring 2015 for \$199.95.

DN-200AZB Bluetooth Receiver with Zone Amplifier —The DN-200AZB receives Bluetooth audio content and powers local speakers with its built-in 70V/100V digital Class D amplifier. The interface is perfect for restaurants, behind bars, at display kiosks, and anyplace where having bulky and complicated signal-producing equipment is not feasible. Simply stream audio wirelessly from any Bluetooth enabled smartphone, tablet, or computer and the 200AZB receives it and powers connected speakers—a neat and uncomplicated answer for the Bring Your Own Device revolution. The DN-200AZB will be available for \$199.99 in late Spring 2015.

DN-200BR Bluetooth Audio Receiver — With countless Bluetooth-enabled audio sources roaming the planet, the DN-200BR interfaces them all with a professional audio system for sound reinforcement, event, or retail applications. It receives Bluetooth signals wirelessly, then routes the audio to balanced XLR or ¼-inch outputs for integration with mixers and amplification systems. The DN-200BR will be available in Spring 2015 for \$99.99.

DN-200WS Wi-Fi Audio Streamer — Instantly add DLNA and AirPlay support to an audio system. The DN-200WS receives signals over 802.11 a/b/g/n Wi-Fi and sends audio output via its XLR or balanced ¼-inch outputs. A maximum 28Mbps data connection speed ensures an optimum

connection with support for 24-bit audio at up to 192kHz sampling rates. The DN-200WS will be available for \$149.99 in Spring 2015.

DN-202WT/DN-202WR Wireless Audio Transmitter and Receiver — For applications where unsightly cable runs or drilling of holes is not permissible, the DN-202 series is ideal for getting stereo audio from point A to B. The DN-202WT is a wireless audio transmitter with balanced XLR and ¼-inch inputs, enabling users to send audio from a professional audio mixer or source through walls and ceilings up to 200 feet (60m) away. The DN-202WR is the companion receiver, featuring balanced XLR and ¼-inch outputs for connection to loudspeakers or amplification systems. Multiple DN-202WR's may be used with a single DN-202WT to optimize sound coverage at an event or split indoor/outdoor/multi-level venues. Both the DN-202WT and DN-202WR will be available in Spring 2015 for \$99.99 and \$69.99, respectively.

“AV professionals have long needed a method for delivering content from one location to another without creating a science-fair project,” said Costa Lakoumentas, Senior VP at Denon Professional. He continued, “The Solution Series does exactly that—it delivers content wirelessly, securely, reliably and accurately without having to disturb existing installations. There are Solutions models for every requirement, and they’re all east-to-use, predictably easy to mount, and packed with value.”

All Solution Series interfaces feature a rugged metal enclosure with built-in eyelets for mounting screws, and measure a mere 1.8 inches (45mm) high, 6 inches (152mm) wide, and 6 inches deep.

The Solution Series will be on display at the 2015 Consumer Electronics Show in Las Vegas, NV, January 6-9 at the Las Vegas Convention Center in Central Hall, Booth 11640. For more information visit denonpro.com/CES2015.
